

NOTES ON THE 1926-27 EDITION OF LLOYD'S REGISTER OF SHIPPING.

The new edition of Lloyd's Register Book contains as usual very complete particulars of all the sea-going vessels of the world, of 100 tons and upwards, and in addition of the steel and iron vessels trading on the Great Lakes of North America. It thus includes a full record of about 33,000 steamers, motorships and sailing vessels. These bulky volumes comprise also many lists of great practical value to the shipping community, such as :—Signal letters assigned to all sea-going vessels ; Shipbuilders and Marine Engineers in all Countries ; telegraphic and postal addresses of firms connected with shipping in all parts of the world ; particulars of dry and wet docks, ports, harbours, etc., at home and abroad ; particulars of speeds of merchant steamers capable of 12 knots ; particulars of deadweight and cubic capacities of cargo steamers and motor vessels ; lists of bulk oil carriers ; lists of Shipowners and Managers, with the names and tonnages of their respective vessels, etc.

The Section of the book which is perhaps of the greatest interest to the general public is that containing the Statistical Tables. Special attention is drawn to the notice at the commencement of the Section, which defines with precision the bases on which the figures have been compiled.

The contents of the Tables will repay careful study, and the following summary of some of the results which are to be obtained by an analysis of these Tables, and by a comparison with similar Tables issued by Lloyd's Register in previous years, will be found of interest.

CLASSIFICATION OF VESSELS.

It is perhaps only right that before dealing with the other Statistical Tables special attention be drawn to the figures shown in Table No. 4 respecting the number and tonnage of vessels classed by Lloyd's Register of Shipping. The number and tonnage of existing vessels recorded in the new edition of the Register Book (*excluding over half a million tons of new ships afloat in course of classification*), which are now or have been classed by the Society is 15,483 of 38,820,015 tons. Practically all these vessels were built under the inspection of the Surveyors of Lloyd's Register, the most convincing proof of the world-wide appreciation of the work of this Society.

* The figures regarding tonnage of vessels throughout these Notes refer to gross tonnage.

The preceding Table shows that during the last twelve months there has been an increase in the steam and motor tonnage owned in the world of 291,561 tons, and a decrease in the sailing tonnage of 148,609 tons, making a total world *net* increase of 142,952 tons; the net increase from June, 1924 to June, 1925 was 617,851 tons.

The countries showing the largest increases are Italy and Norway, where the increase amounts to 211,969 tons and 161,263 tons respectively.

Of the vessels under the United States flag there is a decrease of 498,719 tons due to the large number of vessels which have been sold for breaking-up purposes. The decrease in the vessels registered in Great Britain and Ireland amounts to 40,914 tons as compared with an increase of 334,873 tons during the twelve months ended June, 1925.

TOTAL ...	45,404,000	62,672,000	+ 17,268,000

The above table shows that there are now in existence 17,268,000 tons more than in 1914, equal to an increase of 38 per cent.

The largest increase has taken place in the United States (nearly $9\frac{1}{2}$ million tons), and in Japan (over $2\frac{1}{4}$ million tons). Increases of over a million tons have occurred in four cases, namely, Italy (1,720,000 tons), France (1,402,000 tons), Holland (1,081,000 tons), and British Dominions (1,057,000 tons). The increase of tonnage belonging to Great Britain and Ireland—372,000 tons—represents barely 2 per cent of the tonnage owned in 1914, whereas the increase of tonnage owned abroad represents 63·7 per cent of the pre-war tonnage.

In 1914 there was owned in Great Britain and Ireland 41·6 per cent of the world's steam and motor tonnage, but owing to the great increase which has taken place since 1914 in the tonnage owned abroad the percentage of 41·6 has now shrunk to 30·7. Similar percentages for the two years respecting the next six leading countries are :—

	1914	1926		1914	1926
UNITED STATES	9·4	21·9	ITALY	3·1	5·0
JAPAN	3·8	6·3	GERMANY	11·3	4·9
FRANCE	4·2	5·3	NORWAY	4·3	4·5

It will be seen that the tonnage now owned in Great Britain and Ireland and in the other six leading countries represents 78·6 per cent of the World steam and motor tonnage, leaving 21·4 per cent for other countries, which in 1914 had only 12·3 per cent.

SAILING TONNAGE.

The reduction in sailing tonnage since pre-war times, say June, 1914, amounts to about 1,868,000 tons gross. The present percentage of sailing vessels to the world's total tonnage is only 3½. Of the world's sailing tonnage 1,058,000 tons—equal to 50 per cent of the total—are now owned in the United States, and the other countries which still have an appreciable amount of sailing tonnage are :—France, 166,000 tons, Great Britain and Ireland, 136,000 tons, Canada 107,000 tons, and Italy, 90,000 tons.

If barges which are generally towed, and other craft included in the sailing tonnage because not fitted with engines for self propulsion, be excluded, the world tonnage of *real* sailing vessels only amounts to about 1,306,000 tons, of which 466,000 tons—equal to 35½ per cent of the total—are owned in the United States, and only 30,000 tons in Great Britain and Ireland.

AGE AND SIZE OF STEAMERS AND MOTORSHIPS.

A considerable increase has taken place in recent years in the number of *sea-going* steamers and motorships of 4,000 tons each and above. In 1914 there were 3,608 such vessels, and now the number reaches 5,843, of which 367 are of 10,000 tons and above, including 43 of 20,000 tons each and upwards. Of the 367 vessels 215 are under the British flag. It may be noted that more than one half of the total number of steamers and motorships in existence are of less than 1,000 tons each.

Table No. 13 shows that of the motorships now in existence there are 377 of 4,000 tons and above. Sixty-nine of them are of 8,000 tons and upwards, their total tonnage amounting to 725,137 tons.

From Table No. 3, in which steamers and motorships are classified according to their size and age, it will be noticed that there are 3,332 vessels less than five years old with a tonnage representing just under 16·6 per cent of the total tonnage in existence. Vessels of 25 years and over amount to 7,247 but their tonnage is only 14 per cent of the total. Of the vessels built in 1901 or before, nearly 51 per cent are of less than 1,000 tons each and the average size of the others is 4,036 tons, while of the vessels built during the last five years 35·7 per cent are of less than 1,000 tons each and the average of the others reaches 4,632 tons.

Of the 864 vessels of 8,000 tons and upwards now in existence, 264 have been built during the last five years.

Of the tonnage owned in Great Britain & Ireland 23·6 per cent is less than five years old. The Merchant Navies which have the largest proportion of new tonnage (less than five years old), are as

follows:—Germany 39·9 per cent, Holland 23·9 per cent, Norway 20·9 per cent; and France 20·2 per cent.

The group of vessels with the largest aggregate of tonnage is that of between 4,000 and 6,000 tons each amounting to 18,008,377 tons, equal to 28·7 per cent of the world's total steam and motor tonnage; of this amount nearly 36 per cent is under British flag; further as regards the big liners, say those of 15,000 tons each and upwards, their tonnage only represents 3 $\frac{5}{6}$ per cent of the total tonnage.

TYPE OF VESSELS AND OF MACHINERY.

Tables Nos. 6 and 7 show:—

- (1) The type of machinery used for the propulsion of vessels.
- (2) Particulars of the Oil Tankers, of the Trawlers and other fishing vessels, and of the steamers fitted for burning oil fuel.

The following summary will not be without interest:—

The first Table shows the great development which has taken place in the use of steam turbine engines and of internal combustion engines. There are now 1,366 steamers of 9,137,675 tons fitted with turbine engines and 2,343 vessels (including auxiliary vessels) of 3,493,284 tons, fitted with internal combustion engines as compared with 730,000 tons and 220,000 tons respectively in 1914.

It may be stated that while during the last 12 months the tonnage of steamers fitted with reciprocating steam engines has actually decreased by about 525,000 tons, there has been an increase of 779,000 tons in the tonnage of motorships and of 37,000 tons in the tonnage of vessels fitted with steam turbines.

The increase in the motorship tonnage recorded in the new edition of Lloyd's Register Book, as compared with 1921, amounts to nearly 2 $\frac{1}{4}$ million tons, representing an increase of over 176 per cent on the total in existence five years ago.

An analysis of the type of machinery now employed shows that there are now recorded in Lloyd's Register Book 30 vessels, with a total tonnage of 473,000 tons, which are fitted with a combination of steam turbines and reciprocating engines. Another interesting particular is that in the case of 40 vessels, with a tonnage of 120,512 tons, a comparatively new system of propulsion has been adopted, viz.:—electric motors connected to the screw shaft, these motors being supplied with current from generators which are driven either by steam turbines or oil engines.

From Table No. 7, it will be seen that there are recorded in the new Register Book 3,576 steamers of 18,243,539 tons fitted for burning oil fuel, of which 773 of 4,924,542 tons are registered in Great Britain and Ireland and 1,851 of 9,002,007 tons are registered in the United States of America.

The figures in these two Tables enable a comparison to be made between the respective employment of coal and oil fuel at the present time as compared with 1914.

		1914 % of total gross tonnage.	1926 % of total gross tonnage.
Sailing vessels and sea-going barges	...	8·06	3·26
Oil, etc., in internal combustion engines	...	0·45	5·39
Oil fuel for boilers	...	2·65	28·16
Coal	...	88·84	68·19
		100·00	100·00

It will thus be seen that only 63½ per cent of the tonnage of the Merchant Marine now depends entirely upon coal while in 1914 the percentage was nearly 89. It must of course be understood that oil is not always used in steamers fitted for burning oil fuel, as such installations can readily be replaced by coal-burning fittings should it happen that oil be unobtainable or its price render it unprofitable.

The Tables show the total tonnage of certain types of vessels, which information would be most useful in estimating the tonnage available for general cargo and passenger purposes. The tonnage of the 1,006 tankers, of 1,000 tons gross and upwards, amounts to 5,598,000 tons; 336 of 1,836,059 tons are registered in Great Britain and Ireland, and 384 of 2,319,314 tons are registered in the United States. In addition there are some 66,000 tons of tankers of less than 1,000 tons each. The tonnage of trawlers and other fishing vessels amounts to 810,000 tons. An analysis of the vessels recorded in the Register Book shows that some 369,000 tons represent tugs and salvage vessels, and 695,000 tons steam barges, dredgers and similar craft, ferries, river vessels and vessels owned by Municipal Corporations or Harbour Authorities. Although few paddle vessels are now built, the total tonnage of such vessels in existence still amounts to about 393,000 tons.

TONNAGE OWNED IN THE WORLD AT VARIOUS DATES.

Another Table, most useful for the purpose of ascertaining the development of the Merchant Navies during the last thirty-five years, is Table No. 8, which shows for each of the years 1892-1926 the number and the gross tonnage of the steamers and motorships, and of the sailing vessels owned in the world distinguishing also the principal Maritime Countries.

From this Table some remarkable variations can be observed. In 1892 the *gross* tonnage of steamers amounted to 14,562,000 tons, and the *gross* tonnage of sailing vessels to about 9½ million tons. The steam and motor tonnage has increased by 48,110,000 tons while the sailing tonnage has decreased by nearly 7½ million tons *gross*. Apart from the enormous increase which has taken place in the United States seagoing steam tonnage and the recent decrease in the German tonnage, both due to the War, the following are the most noticeable changes during this period of 35 years.

The sail tonnage registered in Great Britain and Ireland and in Norway, which in 1892 amounted to about 2,760,000 tons gross and 1,450,000 tons gross respectively, is now reduced to 136,000 and 35,000 tons respectively.

The increase in the steam and motor tonnage owned in Great Britain and Ireland amounts to practically 10½ million tons. The steam tonnage of the following countries is now more than six times as large as it was in 1892:—Denmark, Holland, Italy, Japan, Norway, and Sweden. The most remarkable increase has taken place in Japan, the steam tonnage of which country now reaches a figure equal to nearly 28 times the total owned in 1892. The present steam tonnage of Italy is nearly 10 times, and that of Holland nearly 9 times, larger than in 1892.

TONNAGE LOST AND BROKEN UP.

The new Statistical Tables include a Table (No. 12) showing the tonnage of steamers and motorships lost and broken up each year, from 1902 onwards. As regards losses one point deserves special mention, and that is the important decrease in the percentage lost during the last five years as compared with other quinquennial periods in pre-war times. The average yearly percentage of steam tonnage lost during the years 1921-25 amounts to less than 0·73 per cent, while for instance, during the years 1909-13 the average was nearly 1·19 per cent. These figures are, of course, to some extent influenced by the large amount of tonnage laid up during recent times.

The figures for steamers broken up vary to an enormous extent from year to year. During the period 1905-1909 the minimum was 120,003 tons, and the maximum 251,900 tons; during 1910-1914 the variation is from 87,787 tons to 245,891 tons. During the years 1915-1920 practically no tonnage was broken up, the yearly average only amounting to 10,000 tons. Quite different conditions are shown for recent years. During 1921 the tonnage broken up amounted to 77,500 tons; it increased to 315,000 tons for 1922; to 963,000 tons for 1923; and for the year 1924 the total reached 1,174,000 tons. The tonnage broken up during 1925 amounted to 653,000 tons. It is obvious that the tonnage broken up has an important bearing on the shipping position, and that if it were continued for some years on the high level reached in 1924, it would go some way towards solving the problems that confront ship-owners; the figures for 1925, however, and the most recent returns show a decided falling off in the amount of tonnage being broken up.

GENERAL NOTES ON THE STATISTICAL TABLES.

These Tables are based throughout on the *Gross tonnage*.

Motorships and Sailing vessels fitted with auxiliary power are included throughout in the figures indicated for steamers unless shown separately.

Reinforced Concrete vessels are included in the figures shown for steel.

The Register Book includes a certain number of vessels which although not actually completed at the date of printing are expected to be completed in the near future.

Steamers of less than 100 tons gross, and Sailing vessels of less than 100 tons net, are not included, except in Tables 4, 5 & 14.

Vessels trading on the Caspian Sea, and *Wood* or *Composite* vessels trading on the Great Lakes of North America, are not included.

In the absence of satisfactory information, the records of most of the Sailing vessels belonging to Greece, Turkey, and Southern Russia, are omitted from the Register Book and therefore do not appear in these Tables.

Sailing vessels owned in Japan are not recorded in Lloyd's Register Book and therefore do not appear in the Tables.

Under the heading of "Country not stated" are included all vessels which are entered in the Register Book without record of flag owing to no definite information having been received up to the time of going to press.

NOTES GÉNÉRALES RELATIVES AUX TABLEAUX STATISTIQUES.

Ces Tableaux sont tous basés sur le tonnage *brut*.

Les navires à moteurs et les navires à voiles munis de machines auxiliaires sont toujours inclus dans les chiffres indiqués pour les vapeurs, à moins qu'ils ne soient montrés séparément.

Les navires en béton armé sont inclus dans les chiffres des navires en acier.

Le Register Book comprend un certain nombre de navires qui n'étaient pas encore achevés à l'époque de l'impression de l'ouvrage, mais qui le seront, on s'y attend, dans un avenir prochain.

Les vapeurs d'un tonnage brut inférieur à 100 tonneaux et les voiliers d'un tonnage net inférieur à 100 tonneaux, ne sont pas compris dans ces Tableaux, exception faite des Tableaux 4, 5 et 14.

Les navires naviguant sur la Mer Caspienne, et les navires *en bois ou composite* naviguant sur les grands lacs de l'Amérique du Nord, ne sont pas compris dans ces Tableaux.

En l'absence de renseignements authentiques, la plupart des voiliers appartenant à la Grèce, à la Turquie et au sud de la Russie n'ont pas été inclus dans le "Lloyd's Register Book"; ils ne figurent donc pas non plus dans ces Tableaux.

Les navires à voiles appartenant au Japon ne figurent pas au "Lloyd's Register Book"; par suite ils ne figurent pas dans les Tableaux.

Sous l'en-tête "Country not stated" (Pays non indiqué) sont compris tous les navires qui figurent au "Lloyd's Register Book" sans indication de pavillon, des renseignements positifs à ce sujet n'étant pas encore en possession de la Société, à l'époque de l'impression de l'ouvrage.
