

STATISTICAL NOTES ON THE 1936-1937 EDITION OF LLOYD'S REGISTER BOOK.

Lloyd's Register Book for 1936-7 has now been issued to Subscribers by the Committee of Lloyd's Register of Shipping. The new edition—the 103rd annual issue since the Re-Constitution of the Society—contains, as usual, very complete particulars of all sea-going merchant vessels of the world of 100 tons and upwards, and also of steel and iron vessels trading on the Great Lakes of North America, and of other vessels classed with the Society. It includes a detailed record of upwards of 31,000 steamers, motorships, sailing vessels and non-propelled craft.

The impressive volumes comprise also many lists of great practical value to the shipping community, such as :—Shipowners and Managers all over the world, with the names and tonnages of their respective vessels; Shipbuilders in all countries, with lists of iron and steel vessels built by them, and Makers of Marine Engines and Boilers in all countries; detailed particulars of dry and wet docks, ports, harbours, etc., in each country; telegraphic and postal addresses of some 20,000 firms connected with shipping in all parts of the world; steamers and motorships of 10,000 tons and upwards, arranged according to nationality and gross tonnage; particulars of the speed of merchant vessels capable of 12 knots and upwards; particulars of deadweight and cubic capacities of cargo steamers and motorships; lists of vessels carrying oil in bulk; lists of vessels fitted with refrigerating appliances, etc.; list of former names of vessels; index to vessels having compound names; and others.

The Section of the Book which is probably of most general interest to the public is that containing the Statistical Tables, which give extensive and precise information respecting the various merchant fleets of the world.

The contents of the Tables will repay careful study, as they enable an accurate comparison to be made of the number, material, description, size, age and type of vessels owned in the various countries. Special attention should be given to the notice at the beginning of the Section, in which are defined the bases upon which the figures have been compiled, and the following summary of an analysis of the Tables, and comparison with similar Tables issued by Lloyd's Register in previous years, is of considerable interest.

CLASSIFICATION OF VESSELS.

Before dealing with the other Statistical Tables, particular attention is drawn to the figures shown in Table No. 6 regarding the number and tonnage of Vessels Classed by Lloyd's Register of Shipping. The number and tonnage* of existing vessels recorded in the new edition of the Register Book which are now or have formerly been classed by the Society, or for which classification is contemplated, is 14,200 of 40,200,269 tons. Practically all these vessels have been built under the inspection of the Surveyors of Lloyd's Register. Of the tonnage actually holding the Society's class, 43·2 per cent. is registered in Great Britain and Ireland and 56·8 per cent. in other countries.

* The figures regarding tonnage of vessels throughout these Notes refer to gross tonnage.

The Tables show that during the last twelve months there has been a decrease in the steam tonnage owned in the world of 708,340 tons, an increase of 985,908 tons in the motor tonnage, and a decrease in the tonnage of sailing vessels and non-propelled craft of 99,897 tons, making a *net* increase of 177,671 tons in the total tonnage for the world. Between June, 1934, and June, 1935, there was a *net* decrease of 690,640 tons.

The countries showing notable increases for the last twelve months are:—Panama (292,491 tons); Italy (213,753 tons); Japan (130,040 tons); Soviet Russia (104,126 tons); Greece (89,685 tons); and Norway (86,513 tons). In the case of Soviet Russia, owing to the difficulty experienced in obtaining precise information, the figures may not be comprehensive.

The largest decreases amongst the principal maritime countries are the following, viz.:—United States of America—Sea (293,962 tons); and Great Britain and Ireland (114,950 tons). A reduction of 256,980 tons since last year in the tonnage registered at Danzig is reflected in the increase shown for Panama.

The preceding Table shows that from June, 1914, to June, 1925, the net increase in the world's steam and motor tonnage was 16,976,000 tons, equal to 37·4 per cent. of such tonnage in existence in 1914, and that the net addition since 1925 amounts to 1,625,000 tons, equal to 2·6 per cent. of the tonnage at 1925.

A comparison of the figures for 1914 and 1925 shows that the largest increases took place in the United States—Sea (9,905,000 tons), Japan (2,212,000 tons), Italy (1,501,000 tons) France (1,398,000 tons), and Holland (1,116,000 tons). The only decrease during this period was that in the case of Germany (2,129,000 tons).

Since 1925, the largest increases have taken place in Norway (1,436,000 tons), Greece (906,000 tons), Germany (702,000 tons), British Dominions (387,000 tons), Japan (296,000 tons), and Sweden (253,000 tons); on the other hand the sea-going tonnage of the United States has decreased by 2,498,000 tons, and that of Great Britain and Ireland by 2,122,000 tons. There have also been decreases in France (347,000 tons), and Holland (81,000 tons).

Since June, 1914, there has actually been a *net* decrease in the tonnage belonging to Great Britain and Ireland of 1,709,000 tons, or 9·0 per cent. of the tonnage owned in 1914, whereas the aggregate increase of tonnage owned in other countries during the same period represents more than 76 per cent. of the pre-war tonnage owned abroad.

Notwithstanding increases of 2,352,000 tons from June, 1921, to June, 1925, and of 702,000 tons since June, 1925, the present totals for Germany are still 1,427,000 tons below those for June, 1914.

The present century has witnessed unprecedented development in the mercantile fleets of the world, the steam and motor tonnage having increased from 24,008,883 tons in 1901 to 64,004,885 tons in 1936. The concurrent increase in the tonnage owned abroad is indicated in the following Table, comprising the eight leading countries :—

Country.	Percentage of Steam and Motor Tonnage owned in the World.			Country.	Percentage of Steam and Motor Tonnage owned in the World.		
	1901	1914	1936		1901	1914	1936

			6·3				4·8
							4·4
							4·2
							4·6
							2·1
							3·2
							3·9

Of these leading countries it will be seen that, apart from Great Britain and Ireland, France was the only one to show a decrease in the proportion of tonnage owned during the period 1901–1914, and that since 1914 Great Britain and Ireland and Germany alone show a decrease.

TONNAGE OF SAILING VESSELS, NON-PROPELLED BARGES, ETC.

The reduction in the tonnage of sailing vessels and non-propelled barges, etc., since pre-war times, say June, 1914, amounts to about 2,905,000 tons gross. The present proportion of such tonnage to the world's total tonnage is less than 2 per cent. Of the world's tonnage of such sailing vessels and barges, 570,000 tons (53·8 per cent. of the total) are now under the United States flag, and the other countries which still have an appreciable amount of similar tonnage are : Great Britain and Ireland, 103,000 tons ; Canada, 65,000 tons ; Finland, 56,000 tons ; Italy, 41,000 tons ; and France, 29,000 tons.

If barges such as are generally towed, and other craft included in the sailing tonnage because not fitted with engines for self-propulsion, be excluded, the world tonnage of real sailing vessels amounts only to some 374,000 tons, of which 97,000 tons (25·9 per cent. of the total) are owned in the United States, 56,000 tons are owned in Finland, 41,000 tons in Italy, 18,000 tons in France, 15,000 tons in Portugal, 14,000 tons in Peru, and only 10,000 tons in Great Britain and Ireland. It may be of interest to state that there are still in existence 9 sailing vessels of between 3,000 and 3,400 tons gross each.

SIZE AND AGE OF STEAMERS AND MOTORSHIPS.

A considerable increase has taken place in recent years in the number of *sea-going* steamers and motorships of 4,000 tons and above. In 1914 there were 3,608 such vessels, and now the number reaches 6,075, of which 496 are of 10,000 tons and above, including 71 of 20,000 tons each and upwards. Of the 496 vessels, 238 are under the British flag.

It may be noted that over one-half of the total number of steamers and motorships recorded in Lloyd's Register Book are of less than 1,000 tons each.

Table No. 8 shows that of the motorships now in existence in the world there are 1,353 of 4,000 tons and above. Two hundred and sixty-five of them are between 8,000 and 10,000 tons each, and 152 are of 10,000 tons and upwards.

From Table No. 5, in which steamers and motorships are classified according to their size and age, it will be noticed that there are 2,264 vessels less than five years old, with a tonnage representing 7·7 per cent. of the total steam and motor tonnage. Vessels of 25 years and over amount to 9,153, with an average tonnage of 1,247 tons, compared with 2,174 tons for those under five years of age.

Of the 1,168 vessels of 8,000 tons and upwards now in existence, 151 have been built during the last five years.

Of the tonnage owned in Great Britain and Ireland, 9·5 per cent. is less than five years old. The countries having the largest proportion of new tonnage (less than five years old), are Australia and New Zealand together, with 15·1 per cent., Norway with 12·6 per cent., Japan with 12·6 per cent., France with 12·3 per cent., and Denmark with 11·1 per cent. On the other hand, among the principal maritime countries, Holland has but 8·8 per cent., Germany, 8·0 per cent., Spain, 6·6 per cent., Sweden, 6·3 per cent., Italy 5·8 per cent.; while of the United States sea-going tonnage only 2·9 per cent., and of Greek tonnage less than 0·5 per cent. is under five years old.

Of the tonnage registered in Great Britain and Ireland, 81·8 per cent. is *under* 20 years old and 59·0 per cent. is *under* 15 years old; while the corresponding percentages for the tonnage owned abroad are 68·5 and 36·3 per cent.

The size-group of vessels with the largest aggregate of tonnage is that from 4,000 to 6,000 tons each, comprising 17,896,340 tons, equal to 27·2 per cent. of the world's total steam and motor tonnage. The big liners, *e.g.*, those of 15,000 tons each and upwards, represent only 5·7 per cent. of the total tonnage; it may be noted, however, that upwards of 46 per cent. of such liner tonnage is registered in Great Britain and Ireland.

TYPE OF MACHINERY.

Table No. 3 gives particulars of the number and gross tonnage of steamers and motorships according to the type of machinery used for their propulsion, and the following summary is of interest:—

The figures show the extent of the great development which has taken place in the use of steam turbine engines and of internal combustion engines. There are now 1,632 steamers of 11,319,169 tons fitted with turbine engines or a combination of steam turbines and reciprocating engines, and 6,128 vessels (including auxiliary vessels) of 12,290,599 tons, fitted with internal combustion engines, as compared with 730,000 tons and 220,000 tons respectively in 1914.

While during the last twelve months there has been an increase of 986,000 tons in the tonnage of motorships, and of 47,000 tons in the tonnage of vessels fitted with steam turbines, there has been a reduction of 1,097,000 tons in steamers fitted solely with reciprocating steam engines. Since June, 1925, there has been an increase of 9,577,000 tons in the motorship tonnage.

It will be observed that of 9,195,421 tons of Oil Tankers, excluding vessels of less than 1,000 tons gross, 5,119,488 tons are steamers and 4,075,933 tons are vessels fitted with internal combustion engines.

Although the total motor tonnage amounts only to 18·9 per cent. of the aggregate tonnage owned in the world, and, in the case of Great Britain and Ireland, only to 18·4 per cent. of the tonnage registered there, the highest percentages among the principal maritime countries are to be found in the following, viz.: Norway 51·8, Denmark 46·1, Sweden 38·7, and Holland 36·9; whereas Greece, the United States and France have the smallest proportions of motor tonnage, viz.: 0·4, 5·8 and 9·7 per cent. respectively.

An analysis of the type of machinery now employed also shows that there are recorded in Lloyd's Register Book 409 vessels, with a total tonnage of 2,210,357 tons which are fitted with a combination of steam turbines and reciprocating engines. Another interesting particular is that in the case of 99 vessels, with a tonnage of 604,573 tons, electric propulsion has been adopted, the motors being supplied with current from generators which are driven either by steam turbines or oil engines. It may be added that auxiliary electric drive has also been adopted in a number of other cases. Of the 99 vessels mentioned above, 58 of 286,168 tons are owned in the United States. Of vessels exceeding 20,000 tons gross in which electric propulsion is employed, five fly the British flag, two are owned in the United States, and one is owned in France.

Of the 29,197 steamers and motorships of 100 tons gross and upwards recorded in Lloyd's Register Book, 3,706 are twin screw vessels, and 115 have triple or quadruple screws.

Although few paddle steamers are now built, there are still in existence and recorded in Lloyd's Register Book 325 such vessels, of 246,790 tons.

COAL AND OIL FUEL.

From Table No. 4, it will be seen that there are recorded in the new Register Book 3,895 steamers of 19,766,668 tons fitted for burning oil fuel, of which 795 of 5,158,539 tons are registered in Great Britain and Ireland, and 1,522 of 7,806,199 tons are registered in the United States of America.

The above figures, in conjunction with those given in the preceding section, enable a comparison to be made between the respective employment of coal and oil fuel at the present time as compared with 1914.

	1914 % of total gross tonnage.	1936 % of total gross tonnage.
Coal	88·84	49·10
Oil fuel for boilers	2·65	30·38
Oil, etc., in internal combustion engines	0·45	18·89
Sailing vessels, non-prop. barges, etc. ...	8·06	1·63
	100·00	100·00

It will thus be seen that slightly less than 50 per cent. of the tonnage of the World's Merchant Marine now depends entirely upon coal, while in 1914 the percentage was nearly 89. The tonnage of steamers using coal which in 1914 reached 43,860,000 tons is now 31,948,000 tons, or, say, nearly 12 million tons less.

It is, of course, to be understood that oil is not necessarily always used in steamers fitted for burning oil fuel, as a number of such installations can be replaced by coal-burning fittings when occasion demands the use of coal in preference to oil.

TYPE OF VESSELS.

The Tables show the total tonnage of certain types of vessels, and this information is of great service in enabling an estimate to be made of the tonnage available for *general cargo and passenger purposes*. The tonnage of the 1,475 oil tankers, of 1,000 tons gross and upwards, amounts to 9,195,421 tons;

372 of 2,314,052 tons are registered in Great Britain and Ireland, 388 of 2,489,725 tons are registered in the United States, and 229 of 1,657,782 tons in Norway. In addition, there are 120,845 tons of tankers of less than 1,000 tons each. The tonnage of steam and motor trawlers and other fishing vessels and whalers amounts to 1,122,674 tons. An analysis of the vessels recorded in the Register Book shows that 402,278 tons represent tugs and salvage vessels; ferries amount to 297,753 tons; cable vessels to 67,432 tons; while river vessels and vessels owned by Municipal Corporations or Harbour Authorities, and steam barges, dredgers and similar craft, amount to 493,427 tons.

It will thus be seen that, without taking into account size, age or material, there are about 11,700,000 tons of vessels which are not used for ordinary cargo and passenger purposes.

TONNAGE OF OCEAN-GOING STEAMERS AND MOTORSHIPS AVAILABLE FOR GENERAL CARGO AND PASSENGER PURPOSES.

If all vessels of the types mentioned in the preceding paragraph be omitted, and disregarding also

(a) Vessels trading on the Great Lakes of North America,

(b) Wooden and composite vessels,

(c) Vessels of less than 4,000 tons gross, and

(d) Vessels over 25 years old (*with the exception of a few which exceed that age but are still capable of a high speed*) and presumably of less efficiency than more modern vessels,

the following figures are obtained which indicate the relative position of the principal maritime countries as regards the more efficient ocean-going vessels available for general cargo and passenger purposes.

WORLD TOTALS ...	64,004,885	100·00	30,000,128	100·00

The above Table shows the relatively high efficiency of the merchant fleet of Great Britain and Ireland, which, while including 26·85 per cent. of the world steam and motor tonnage as recorded in the Register Book, actually comprises 36·06 per cent. of the more efficient ocean-going tonnage available for general cargo and passenger purposes.

Considerable differences are also shown as regards four other countries, viz.: Germany, Italy and France—which, from percentages of 5·79, 4·78 and 4·64 respectively of the total tonnage, rise to 7·31, 6·13 and 5·64 per cent. of the ocean-going tonnage as defined above—and on the other hand Norway, which from 6·33 per cent. is reduced to 3·39 per cent. This reduction is, of course, due to the very large proportion of oil tanker tonnage included in the Norwegian merchant marine, such tonnage being deducted for the purposes of the second part of this Table.

TONNAGE OWNED IN THE WORLD AT VARIOUS DATES.

Another Table, clearly illustrating the development of the Merchant Navies during the last thirty-five years, is Table No. 10, which shows for each of the years 1902–1936 the number and the gross tonnage of the steamers and motorships, and of the sailing vessels, owned in the world, distinguishing also the principal maritime countries.

From this Table some remarkable variations can be observed. In 1902 the gross tonnage of steamers amounted to 25,860,000 tons, and the gross tonnage of sailing vessels to about 6,898,000 tons. Since then, the steam and motor tonnage has increased by about 38 million tons, while the sailing tonnage has decreased by more than five-and-three-quarter million tons. Apart from the enormous increase which has taken place in the United States sea-going steam and motor tonnage since 1916, and the decrease, during the period 1914–1921, in the German tonnage, both due to the War, the following are the most noticeable changes during the thirty-five years:—

The sail tonnage registered in Great Britain and Ireland and in Norway, which in 1902 amounted to about 1,656,000 tons gross and 827,000 tons gross respectively, is now reduced to about 103,000 tons (mostly non-propelled barges, etc.), and 800 tons, respectively.

The increase in the steam and motor tonnage owned in Great Britain and Ireland amounts to 4,285,000 tons. As compared with 1902, the most notable increases in steam and motor tonnage owned—other than in the case of the United States—are shown at the present time by the following five countries, viz.: Japan, with a tonnage now equal to 7·6 times the earlier figures; Greece, 6·3 times; Norway, 4·7 times; Holland, 4·5 times; and Italy, 4·4 times.

TONNAGE LOST AND BROKEN UP.

The Statistical Tables include one (No. 14) showing the tonnage of steamers and motorships lost and broken up in each calendar year, from 1912 onwards. As regards losses one point deserves special mention, and that is the considerable decrease in the percentage lost during the last five years as compared with the pre-war quinquennial period. The average yearly percentage of steam and motor tonnage lost during the years 1931–35 only amounts to 0·50 per cent., whereas during the years 1909–13, for instance, the average was 1·17 per cent. Apart from the improvement in means of communication and safety appliances generally, these figures may, of course, be influenced to some extent by the large amount of tonnage laid up during recent times.

The figures for steamers and motorships broken up vary to a very large extent from year to year. During the period 1905–1914 the minimum was 87,737 tons, and the maximum 251,900 tons. During the years 1915–1920 practically no tonnage was broken up, the yearly average only amounting to 10,000 tons. Quite different conditions are shown for recent years. During 1921 the tonnage broken up amounted to 77,500 tons; it increased to 315,000 tons for 1922, and to 963,000 tons for 1923, since which year it has kept at a high level with the exception of the year 1927. From 1930 the figure rose sharply until 1933, when the two-million mark was passed for the first time. During the last two years the totals have decreased, and although the 1,151,278 tons broken up during 1935 is still very considerable, it is 383,000 tons less than the yearly average for the last five years, and only 11,000 tons more than that for the ten-year period 1926–35.

The aggregate steam and motor tonnage broken up during these ten years—11,399,000 tons—represents a yearly average of 1·7 per cent. of the tonnage owned. Adding to these figures the tonnage of steamers and motorships lost through casualties during the same period—3,847,000 tons—it will be seen that the average wastage of sea-going merchant tonnage (excluding sailing vessels) is little more than 2 per cent. per year of the tonnage owned.

The total figures for tonnage broken up during the ten years include 3,408,000 tons registered in Great Britain and Ireland ; 2,212,000 tons in the United States (excluding Lake vessels) ; 1,279,000 tons in Italy ; 849,000 tons in France ; 589,000 tons in Germany ; and 587,000 tons in Japan.

As regards Great Britain and Ireland the tonnage broken up during this period amounts to 1·8 per cent. of the total tonnage owned, as compared with 1·6 per cent. in respect of tonnage owned abroad. It is to be noted, further, that of the tonnage now owned in Great Britain and Ireland only 18·2 per cent. consists of vessels of 20 years of age and above, whereas of the tonnage owned abroad 31·5 per cent. consists of vessels of such age.

NOTES GÉNÉRALES RELATIVES AUX TABLEAUX STATISTIQUES.

Tous ces Tableaux sont basés sur le tonnage *brut*.

Les vapeurs et navires à moteurs d'un tonnage *brut* inférieur à 100 tonneaux et les voiliers d'un tonnage *net* inférieur à 100 tonneaux, ne sont pas compris dans ces Tableaux, exception faite des Tableaux 6, 7, et 9.

Les navires à voiles munis de machines auxiliaires sont compris dans les chiffres indiqués pour les vapeurs ou navires à moteurs, suivant le type des machines auxiliaires.

Les navires en béton armé sont inclus dans les chiffres des navires en acier.

Le Register Book comprend un certain nombre de navires qui n'étaient pas encore achevés à l'époque de l'impression de l'ouvrage, mais dont on prévoit l'achèvement prochain.

Les navires naviguant sur la Mer Caspienne, les navires *en bois ou composite* naviguant sur les grands lacs de l'Amérique du Nord et les navires à voiles appartenant au Japon, à la Grèce, à la Turquie et au sud de la Russie, ne figurent pas au "Lloyd's Register Book"; par suite ils ne figurent pas dans les Tableaux.

Sous l'en-tête "Country not stated" (Pays non indiqué) sont compris tous les navires qui figurent au "Lloyd's Register Book" sans indication de pavillon, vu que des renseignements positifs à ce sujet ne se trouvaient pas en possession de la Société à l'époque de l'impression de l'ouvrage.
